MEXICAN MUSTANG LINIMENT.

MESSAS. A. G. BRAGG & Co.—Gentlemen: We have been using your MEXICAN MUSTANG LINI-MENT with the most perfect success. One of our most valuable Express horses had been much troubled

by large swellings or tumors on the fetlocks; they had grown larger than hen's eggs. Besides being disfigured by these appendages, the limbs and joints appeared quite stiftened, swellen and lame. We had tried many Liniments and other remedies, but nothing appeared to produce any effect upon them. We would willingly have given twenty-five dollars to have had then removed, as it the best restored to even the strength of the stre

had them removed, and the horse restored to sound-ness. Our hostler obtained some of your Liniment, and applied it without our knowledge. A few days ago he called our attention to the horse, and to our

surprise and gratification, his legs were perfectly smooth, the tumors having entirely disappeared! We asked him by what magic he had effected such a re-markable cure? His reply was that he had been using the MUSTANG LINIMENT on them about ten days,

and the result was the entire removal of the tumors without producing any soreness or leaving a scar.

We therefore take great pleasure in recommending the Liniment, and shall continue to use it whenever occasion requires, in preference to any other preparation, so long as it produces such remarkable results.

IMPORTANT FOR BOATMES & BOAT-Builders, Railroad and Bridge Builders. I HAVE invented (and am applying to use so far as to fully test its properties) a Check or Rubber, for the purpose of checking and holding permanently a boat when entering the locks or any other edge place, through which it may pass, on the several canals.—
The invention is as follows, viz: A sill of proper dimensions laying across the boat, in the centre of which is a full transport. is a fulcrum or axle to work a lever or tiller on, paral lel to and on the top of the sill are two pieces of tim-ber, of suitable size, for the purpose of sliders; at the centre above named, in the sill, is also a pivot fulcrum or axle for the lever to take hold of and work hie slid ing pieces in straight lines with, and in opposite di rections to, each other, jutting the ends of the shdim pieces out of the sides of the bant and thus theck it rections to, each other, jutting the ends of the shding pieces out of the sides of the boat and thus check its headway, by rubbing against the mason work of the lock. The lever when placed on the two sliding pieces will be in form as in Euclid, book 1st, propositions 27th, 28th, and 29th, of a line falling on two straight lines, and the changes by the required moving of the straight line producing at the same inoversant of the two sliding pieces may be effected by other fixture, such as the placing between the two sliding pieces a cog-wheel, to turn with a crank or lever, or by placing in a line with them something operating as a jack-screw, or other something of the kind which will produce the required operation, such as two pieces, one end of each piece made fast to a sliding piece and the two ends joined, so as to form an obtuse angle, which when drawn to a straight line will produce the same operation on the two angles abopposite sides, such as would form the rhambus or rhambaid all of which will answer the same purpose; rollers may be placed in different ways on the end of the sliding pieces that juts out if such be required. I think the above will sufficiently describe the form of the check, and the line or lever falling on the other two streight lines or pieces will fully illustrate the fluxional co-efficient or moving cause.

N. B. Mr. SAML, W. SERDER

N. B. Mr. SAML, W. SPRIDER and to be come agent, for the distribution of the above named Rubber, after a Patent will have been obtained. I will Rubber, after a Patent will have been obtained. I will here state, also, that I have yet many inventions in my shop of years standing, which are new and useful—such as Levers and Jacks for raising the spans of bridges, after they have suaken by usage, without the trouble of tresseling in the water. The same can be applied in building wood or iron bridges, so that in a short time they can be raised without much expense or loss of time, besides others which I shall not mention further than that the drafts can be seen at any time.
